

SHELL CLAVUS OILS

Refrigerator Compressor Oils

Shell Clavus Oils are highly refined special mineral oils having excellent low temperature properties and are intended primarily for the lubrication of refrigerator compressors.

They exhibit very high thermal stability and have good chemical stability with the refrigerants commonly used in industrial service. They do not contain additives or pour point depressants as these have been known to impair the performance of some refrigerator systems.

Shell Clavus Oils may also be used in other applications where abnormally low ambient temperatures require the use of non-additive oils with exceptionally low pour points.

ITEM DESCRIPTION	MOODYPART
SHELL CLAVUS OILS 5L	
CLAVUS 15	special
CLAVUS 32	7001007
CLAVUS 46	special
CLAVUS 68	7001010
SHELL CLAVUS OILS 20L	
CLAVUS 15	7001201A
CLAVUS 32	7001008A
CLAVUS 46	7001009A
CLAVUS 68	7001011A

Applications

Industrial refrigeration plants using refrigerant R.12 and ammonia. For low temperature systems where refrigerants such as R.22 13B1 & R.502 are commonly used, the semi-synthetic Shell SD Refrigerator Oil formulation is primarily recommended.

SHELL DONAX TA

Automatic Transmission Fluids

An automatic transmission fluid designed for use where a Dexon IID ATF was originally specified. Shell Donax TA is recommended for many automatic transmissions manufactured by General Motors, Mercedes-Benz, ZF and Allison. Shell Donax TA is also suitable for automotive hydraulic and power steering applications.
